

QUALITY POLICY

Distrupol is totally committed to achieving the highest levels of quality in all areas of its business.

The senior management of Distrupol will establish measurable quality objectives for the business and ensure that these are appropriately communicated and understood at all levels in the organisation. The Company will then periodically and systematically review its performance against these objectives.

The Company recognises that if these objectives are to be achieved, all employees must share in its commitment and be encouraged to take a responsible role in continuous quality improvement.

In the competitive market area in which the Company is involved, customer's needs and expectations from its suppliers are continually increasing. The Company will endeavour to fully understand its customer's needs and expectations and exceed them where feasible to do so.

A major part of the Companies strategy towards meeting its objectives is to continue to meet the requirements of BS EN ISO 9001.2008

Approval of its management systems to this Standard will demonstrate to customers that the Company is committed to providing a level of service that will as a minimum meet their needs and expectations now and in the future.

Distrupol is committed to strive for quality improvement. It is clearly recognised that meeting the requirements of the Standard is the only basis for good quality performance and customer satisfaction.

Conformance to all processes and systems recorded in the Quality Manual are mandatory to all employees.
