Processing Guides for WONDERLITE® PC-122

- A Pre-drying 120°C x 4 hrs
depending on
- a) Humidity
 - b) Storage conditions
 - c) Dryer's performance

B. Barrel Setting Profile

Grade / Application		Nozzle	Compression zone	Feeding zone	Mold Temperature *
PC-122	max.(°C)	300	310	300	70 -120
	min.(°C)	240	240	220	

- * varying with
- a) Thickness of molded articles
 - b) Cooling system design
 - c) Gate and runner system

NOTE :

1. Keep the resin from dust and contamination during handling and production.
2. Do not retain the hot melt at the barrel for a long time between injection cycles.
3. Temperature setting of manifold system should not exceed 330°C to avoid melt from degrading.
4. The injection temperature corresponds to your mould design and piece thickness.

■ Purging :

Heat decomposing resins are not recommended for purging the residual WONDERLITE® and WONDERLOY® in barrel of injection machine and extruder. Polyethylene and polypropylene are the most commonly used heat stable resins for purging purpose.
